DETAILED ACTION

Terminal Disclaimer

The terminal disclaimer filed on 8/3/06 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US patent 6,636,249 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Claim Objections

Claims 1 and 6 are objected to because of the following informalities: The phrase "other level context" is not clear as to which level context the applicant referring to. Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over US patent 6,175,343 (Michell et al), in view of US patent #6,625,299 (Meisner et al).

- As for claims 1, 6: Mitchell et al (hereinafter Michell) teach a computer implemented method and corresponding apparatus for dynamically attaching data items to physical environment, the steps/means for: capturing surrounding contexts including location

level context, visual data and other level context (5:54-60, 8:35-44, 10:15-25, step 1315), wherein the location level context and other level context are sensed by different types of sensing means (11:1-2; receiving input data item from said surrounding contexts; and attaching said data item to said surrounding contexts (6:64-7:8, step 1335). Michell fails to teach capturing of audio data. However in the same field of augmented image, Meisner et al teach the capturing of audio data (6:60-7:3). It would have been obvious to one of skill in the art, at the time the invention was made to combine Meisner's teaching of capturing audio data to Michell. Motivation of the combining is for augmenting information directed toward any combination of user's means for sensing the environment, as suggested by Meisner.

- As for claim 2: Data item are registered as being related to said surrounding contexts (10:7-25).
- As for claim 3: The data item related to said surrounding contexts and time information are designated to future or past time (5:44-46, 9:19-25).
- As for claim 4: The other level context is object level context (5:60-6:13).
- As for claim 5: The capturing step is continuously performed so that surrounding contexts are always captured (10:60-11:7).

Response to Arguments

Applicant's arguments with respect to claims 1-6 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 2179

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
